CAREER OBJECTIVE

I am a junior MERN Stack web developer. I have mid-level experience in developing full-stack dynamic websites. I also did some projects. Now I want to work in production to develop my skills more.

SKILLS

Expertise – HTML, CSS, Javascript, React, Bootstrap, Tailwind, React Router, Firebase Authentication

Comfortable –Node js, Express js, Mongo DB, Axios, React Query, React hook form

Tools – Github, Firebase, Heroku, Netlify, VS Code, Chrome dev tool, Postman

PROJECTS

01 - Mars Technology (Manufacturing Company website) - (client-side || server-side)

- In dashboard user can see their all orders, paid or non-paid orders and profile
- In Admin only page admin can add parts, remove, shift parts, also manage users
- Users can add a review of the parts, their review will appear in home page

02 - Perfume Stockpile (Warehouse management website) - client-side || server-side

- Products can be shift and restocked. if product delivered quantity will decrease
- All orders are available on the inventory page. On this page, the product can be deleted
- On add item page product can be added

03 - Personal Photographer (Photographer website) - client-side

- Anyone can hire the photographer personally
- User must be logged in to hire otherwise he will be redirected to login page
- In the home page user can see the category of photoshoot
